

ReeVue

Company & Interview Review Platform

Project Overview Documentation

Your Experience. Our Community.

Instructor: Hesham Mohammed

2024 / 2025

1. Project Overview

ReeVue is a community-driven web platform designed to help job seekers make informed decisions by sharing and reading real experiences about company interviews and workplace culture. Think of it as Google Reviews — but specifically built for companies and job interviews.

Users can search for any company, read authentic reviews about interview processes — including difficulty level, number of rounds, and HR communication — and discover what it is genuinely like to work there in terms of culture, management, and work-life balance. All reviews are posted anonymously to encourage honesty without fear of retaliation.

Inspiration:

- Glassdoor (glassdoor.com) — market leader in company reviews
- Blind / TeamBlind (teambind.com) — anonymous professional community

2. Problem Statement

Job seekers in today's market face several critical information gaps that ReeVue directly addresses:

Problem	ReeVue Solution
No visibility into interview processes	Community-sourced reviews with difficulty ratings, round breakdowns, and real HR attitude feedback
Fear of retaliation for honest feedback	Fully anonymous posting — no identity linked to reviews or salary data
Anonymous platforms attract spam and toxic content	AI moderation layer automatically flags and filters harmful content before it becomes visible
Salary information is opaque to candidates	Anonymous salary crowdsourcing by role and company, aggregated into visible ranges on profiles
Users miss updates on companies they care about	Watchlist feature with email alerts when saved companies receive new reviews or post new jobs

3. Features

3.1 Search & Discovery

Users can search and filter companies by name, industry, city, size, overall rating, and interview difficulty. The platform also surfaces trending companies and recently reviewed organizations on the home page.

3.2 Review System

Reviews cover five key dimensions: Interview Difficulty, HR Communication, Offer Transparency, Work-Life Balance, and Company Culture. All reviews are posted anonymously. Users can upvote, downvote, or flag reviews, and each review supports threaded comment discussions. Rate limiting prevents spam posting.

3.3 Company Profiles

Company profiles are automatically populated with the company logo, headcount size, office locations, aggregated ratings, interview timelines, and anonymous salary ranges contributed by the community.

3.4 Interview Q&A

Users can share real interview questions they encountered, organized by role and department. Other community members can provide answers, creating a continuously updated resource for candidates preparing for interviews.

3.5 User Accounts & Watchlist

Registered users can track their submitted reviews, save companies to a watchlist, and manage notification preferences. The account system supports anonymous contributions while maintaining basic moderation accountability.

3.6 Notifications & Alerts

Users receive email notifications when a company on their watchlist receives new reviews or begins actively hiring, keeping them informed without manual checking.

3.7 AI Content Moderation

An integrated AI moderation layer automatically scans submitted reviews and comments for spam, hate speech, and policy violations before they appear publicly on the platform.

3.8 Salary Data

Anonymous salary submissions allow the community to build a transparent picture of compensation at each company. Data is aggregated into visible ranges per role and seniority level.

4. Team

ReeVue is built by a team of 5 members under the supervision of Instructor Hesham Mohammed. All 5 members collaborate jointly on backend development, database design, and UI/UX design. Frontend pages are distributed as follows:

Team Member	Role
Rehab Mohammed	Frontend – Review Form & User Profile
Basmala Omar	Frontend – Company Profile & Trending Page
Yasmin Abdelhalim	Frontend – Search Results & Login/Signup
Noor Kareem	Frontend – Home Page & Saved Companies
Abdelrahman Montaser	Frontend – Interview Q&A & Notifications

5. Frontend Page Assignments

Each team member is responsible for two frontend pages. The backend, database, and shared UI/UX design are a full-team collaboration.

Member	Page 1	Page 2
Rehab Mohammed	Review Submission Form	User Profile Page
Abdelrahman Montaser	Interview Q&A Page	Notification Page
Noor Kareem	Home Page	Saved Companies Page
Basmala Omar	Company Profile Page	Trending Page
Yasmin Abdelhalim	Search Results Page	Login / Signup Page

5.1 Shared Responsibilities (All Members)

- REST API routes: companies, reviews, users, Q&A, salary, notifications
- Database schema design and setup
- Authentication and session management
- Data validation, security, and rate limiting
- Admin and moderation endpoints
- Design system: colors, fonts, spacing, component library
- Wireframes and mockups for all pages
- Mobile responsiveness and reusable component library

6. Tools & Technologies

Tool / Technology	Category	Purpose
React	Frontend	UI component development
Vercel	Deployment	Frontend hosting & CI/CD
Node.js + REST API	Backend	Server-side logic & API routes
Supabase / Railway	Backend + Database	DB hosting & backend deployment
GitHub	Version Control	Source code collaboration
Trello / Notion	Project Management	Task tracking & planning
Figma / Stitch	Design	Wireframes, mockups & UI system
AI Moderation API	Content Safety	Spam & hate speech detection

7. Project Timeline

Week	Phase	Deliverables
Week 1	Kickoff & Setup	GitHub repo, Trello board, DB schema, role assignment, design system defined
Week 2	UI/UX & Design	Wireframes and mockups for all pages, reusable component library, mobile responsiveness plan
Week 3	Core Frontend	All 10 pages built by assigned members, shared components finalized, design system applied
Week 4	Backend & Integration	REST API routes, database setup, authentication, frontend connected to live data
Week 5	Testing & Deployment	QA testing, bug fixes, deploy to Vercel + Railway/Supabase, demo preparation

8. Project Scope

The following capabilities are within the defined scope of the ReeVue MVP:

- Full-stack review platform with anonymous posting
- Company profiles with aggregated ratings and interview data
- Search and filtering by industry, city, rating, and difficulty
- Ability to share real interview questions organized by role
- Anonymous salary data shared and aggregated by the community
- Email notifications for users watching specific companies
- AI-assisted content moderation to flag spam and hate speech
